

# Yijie (EJay) Guo

385-259-9327

[ejay.guo@gmail.com](mailto:ejay.guo@gmail.com)

Portfolio: [ejayguo.github.io](https://ejayguo.github.io)

## Highlights

Interested in Artificial Intelligence (AI), Machine Learning (ML), Deep Learning (DL), Computer Vision (CV) and Graphics. 2-years' experience in AI and ML research and full-stack web development, game engine and gameplay development.

## Educations

<b>Master of Science in Applied Computing</b>	<b>University of Toronto</b>	<b>Sept 2021 - Dec 2022 (Exp)</b>
Courses: Deep Learning, Trustworthy ML, Tools & Techniques for ML, Foundations of ML, etc. Scholarship: The Vector Scholarship in Artificial Intelligence.		
<b>Bachelor of Science in Computer Science</b>	<b>University of Utah</b>	<b>Jan 2016 - May 2019</b>
Courses: AI, ML, Computer Graphics, Image Processing, Web Architecture, Database Systems, Data Mining, etc. Scholarship: The Wilford and Dana Druk Scholarship. Grade: GPA 3.99 / 4.00, Graduated with <b>Summa Cum Laude</b> . Dean's List from Spring 2016 to Spring 2019.		
<b>Bachelor of Science in Economics</b>	<b>Shanghai University</b>	<b>Sept 2007 - Jul 2011</b>

## Research Experience

<b>Trustworthy ML Project</b>	<b>University of Toronto, Ontario, Canada</b>	<b>Sept 2021 – Dec 2021</b>
<b>Data-free Training Data Reconstruction from Black-box Models [Python, Pytorch, Jupyter, ML, DL]</b> <ul style="list-style-type: none"><li>Created a data-free reconstruction method for rebuilding training data out of black-box neural networks.</li><li>Modified a new energy-based Generative Adversarial Network (GAN) to synthesize training data.</li><li>Formulated a distance-free clustering method extracting most significant features in the latent space.</li><li>Successfully recreated several visually identifiable digits of the MNIST dataset from black-box models.</li></ul>		
<b>Research Assistant</b>	<b>University of Utah, Utah, USA</b>	<b>May 2018 – June 2020</b>
<b>Shape Anomaly Analysis Project [Python, Pytorch, Jupyter, ML, DL, Computer Graphics, Medical]</b> <ul style="list-style-type: none"><li>Built Shape Normality Metric for modeling normal skulls and identifying abnormal ones via neural networks.</li><li>Integrated the ML pipeline for 3D data transformation, data engineering and model deployment.</li><li>Tuned and tested hyper parameters via cross validations and achieved 85 - 95% accuracy.</li></ul> <b>Unmanned Aircraft Systems (UAS) and UAS Traffic Management (UTM) [C, AI, Robotics, Simulation]</b> <ul style="list-style-type: none"><li>Coded the lane-based strategic deconfliction algorithm and passed formal verifications.</li><li>Visualized UAS traffic in the UTM network and optimized the UAS network's speed and throughput.</li></ul> <b>Probabilistic Knowledge Base Implementation [Python, Matlab, ML, CV]</b> <ul style="list-style-type: none"><li>Created an automation DL system detecting and recording videos with single moving object from a live camera.</li><li>Extracted objects' sizes, colors and shapes as features using image processing techniques.</li><li>Trained and converted a Decision Tree (DT) to a Probabilistic Knowledge Base (KB).</li><li>Proved the converted KB was the original DT in explainable format with the same 95% classification accuracy.</li></ul>		

## Software Development Experience

<b>Full-stack Developer</b>	<b>University of Utah, Utah, USA</b>	<b>Mar 2019 – June 2020</b>
<b>Shape Anomaly Analysis Web App Development [C#, JavaScript, Python, Web, AWS, ML, DL]</b> <ul style="list-style-type: none"><li>Designed and built the <b>Shape Anomaly Analysis Project</b> website: (1) Users can upload skull CT scans and review anomaly ratings. (2) Researchers can upload and download datasets for physicians to review and label.</li><li>Individually coded the entire web system of frontend, backend, 3D visualization, database and user management.</li><li>Architected the ML pipeline and system and host it on a Flask server for handling DL analysis.</li><li>Deployed all servers on AWS, published the website and had 100+ active users by June 2020.</li></ul>		
<b>Senior Programmer</b>	<b>Shanda Games: Immortal Studio, Shanghai, China</b>	<b>May 2013 – Apr 2015</b>
<b>Game Engine and Game Development [C++, Gameplay, Physics Simulation, Mobile, AI, Computer Graphics]</b> <ul style="list-style-type: none"><li>Coded component-oriented animation module and optimized collision detection using dynamic space separation.</li><li>Improved garbage collection to speed up resource loading by 70% and created AI behavior tree visualization tool.</li><li>Engineered the gameplay, combat and character module on the mobile client.</li><li>Programmed the player interaction module with finite state machines and AI gameplay behavior trees.</li></ul>		

## Skills

**Programming Language:** C++, C#, Python, Matlab, JavaScript, TypeScript  
**Web Dev & Database Sys:** .Net Core, Flask, OAuth, Angular, Reactjs, MongoDB, SQL Database Sys, Docker, Serverless  
**Amazon Web Services:** Sagemaker & Studio, S3, Route53, EC2 & RDS, Elastic Beanstalk, Lambda  
**Others:** Pytorch, Scikit-learn, Jupyter Notebook, Google Colab, Unity3D, Unreal4, OpenGL, Box2D
